**THE HISTORY OF OUR
SEED BUSINESS**

- We apologize to our old customers for this reprint.
- We want our new customers to know all about us.
- Maybe our old friends would also enjoy reading it again.

4th Generation of Condons
SEEDSMEN OF TOMORROW

Timothy J. Condon
Born July 28, 1941

Leonard Condon The 3rd
Born Oct. 22, 1939

JOHN R. CONDON
(President)

1st Generation Beginning way back in the ages of the old Cradle and Rake when everything on the farm was done by hand and back work, Dad started farming with Mr. Greenlee, a pioneer farmer of old reliable Scotch parents. In those days land of course was cheap, but money was scarcer than hens' teeth and crops very poor on account of inferior seed and lack of proper cultivation; therefore you may know it was mighty hard sledding for a good many years; still, I guess it was a good thing, for during those lean seasons, when it was hard to produce enough to pay the interest on the mortgage set Dad to thinking and figuring how to make both ends meet, and he concluded the best way out was to use extra care in selecting his seed, breeding it up to the highest standard possible and to spare no labor in preparing and cultivating the seed beds after planting. This worked out well and really was the motive or incentive instilled in him in pioneer days, inherited by us boys that prompted us a few years later under Dad's supervision to engage in the Seed growing business in a large commercial way.

LEONARD R. CONDON
(Secretary-Treasurer)

2nd Generation It was during those early days that John and Leonard were born and as we grew up under Dad's careful instructions we naturally followed his trend of thought, so at the age of 13 we both started working out on a small truck farm at the enormous wage of 40c a day. Well do I remember my first day: The boss started John picking peas and I weeding asparagus, and honestly the rows looked a mile long. We stuck to it though, even if it was hard work, and I'll never forget if I live to be a hundred how proud we were when we took our first pay home to Mother. She, too, was proud of us, for while we worked hard and were dirty, she knew it was honest toil and the folks needed the money, and we were glad to help even though it was only a little.

"As You Sow So Shall You Reap" Well, this went on for a few years, Mother insisting we go to school winters and garden in summer. As time passed we realized more fully the necessity of planting good seeds to produce good crops, for we saw many failures from poor seed; consequently, we went into the seed-growing business on our own account, and today we personally grow on our own farms and rented ones thousands of bushels annually of beans, peas, corn, radishes and other seed crops, so we are still actual farmers and really more so than ever before, and we know full well the necessity and wisdom of planting only the best seeds that grow, for the old proverb, "As you sow so shall you reap," is more in evidence today than ever. Being actual producing farmers and gardeners, we know your needs in seeds and understand your wants, your trials and your troubles, so please do not hesitate to inquire for any information on gardening and farming not given in this book. We are here to serve you, and we want to help you this year to grow **Bigger, Better and More Profitable Crops.**

LEONARD CONDON, Jr.
(Vice President)

The Trial Grounds Tell the Truth On our Famous Rock River Valley Seed Farms at Rockford, Illinois, we conduct one of the most extensive Trials of Vegetables, Farm and Nursery Crops, Flowers, etc., in the country. You are cordially invited to visit us and inspect these growing crops. Our display of Tulips, Peonies, Gladioli and other flowers will be a gorgeous sight from early spring until late fall.

3rd Generation In closing we want to introduce to you, Leonard Condon, Jr., who, since his graduation from College 13 years ago has been in charge of the Garden and Flower Seed Departments. Looking forward with pleasure to serving you this year, we are,
Yours sincerely,

CONDON BROS., SEEDSMEN

Big Piece of Mother's Home Made Apple Pie

Plan Now to Have a Big Garden of Fresh, Delicious Tasty Vegetables this year. Sunkist Vegetables out of Your Own Garden, Picked Fresh with the Morning Dew and cooked in your own kitchen, contain far more vitamins and taste better than any the market affords.

Cpl. Calvin E. Smart recently wrote his dear mother at Decatur, Illinois, as follows:

"Dearest Mom:

"Would you send me some Garden Seeds, Mom? Something like Radishes, Onions, Cucumbers, Melons, Cantaloupe, Pop Corn and Sweet Corn, if you can get it. The next place I sit down at for a little while, I am going to have a garden."

Mrs. Smart wrote us immediately and we in turn promptly dispatched with our compliments to Cpl. Smart a nice assortment of all Seeds suitable for planting in his Victory Garden in the South Pacific.

This incident aroused our curiosity and in digging further into the matter we were very much surprised to find that at least in the Central Pacific there is quite a gardening and farming project in existence which follows our advancing troops over a wide territory.

For instance, the Guam garden already covers 5,000 acres which are producing monthly more than 2,000 tons of tomatoes, cabbage, peppers, corn, and other truck for the armed forces. We further found that these farm garden projects started out from scratch a little more than a year ago, and when you consider all the handicaps they encountered and the success of the project, it should be an inspiration to every American at home to have a *Bigger and Better Victory Garden* in 1945 than ever before.

On one project in the New Hebrides thick virgin underbrush had to be uprooted and coral sand scraped away, but with perseverance and the help of some prison labor, our boys last year were the proud producers of 15,000 ears of sweet corn in time for Christmas . . . and that's gardening the hard way! On Guadalcanal before any thoughts of gardening could take place our boys had to remove a thick growth of high knife-edged Kangaroo Grass and in order to do this they had to borrow bulldozers from the Seabees before they could even begin to plow.

Nevertheless, nothing deterred these boys. They overcame these unnatural obstacles and harvested their crops with a very satisfying measure of success.

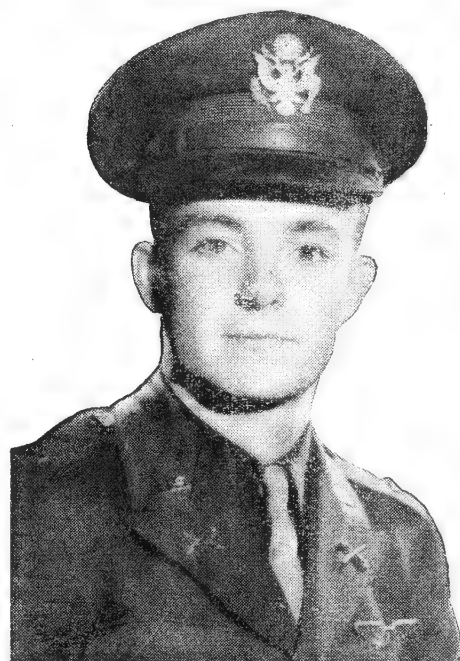

This program has already proved so satisfactory that the Navy is asking for the cultivation of an additional 10,000 acres in the Central Pacific as soon as the fighting moves on far enough, and it should be a pleasant thought for all of us Americans to realize that this chain of overseas victory gardens may reach all the way to Japan!

The big lesson of all of this is that we Americans who grumble about shortages should bend our backs with redoubled effort to plant this spring the finest and most productive victory gardens and thank our lucky stars that we can do it in perfect safety far from the whine of shells and the bursting of bombs.

Condon Bros. Seedmen

Cpl. Calvin E. Smart of Decatur, Illinois (2nd from left), with his "Buddies", lined up for chow in New Guinea. These boys and millions of others appreciate the value of fresh Vegetables. Read the story of gardening in the South Pacific on this page.

Lt. John W. Wyne of Bedford, Ohio, Graduate of Ohio State University. By the time this goes to press, Lt. Wyne probably will be enjoying fresh Vegetables in New Guinea from the Garden Seeds we sent in late fall by request of his good wife.

Lt. Wyne wrote his good wife recently, requesting that an assortment of Garden Seed be sent to him. She in turn made the request to us and promptly same was mailed to him with our compliments.

Our comparative Trial Ground Test this year again proved it beyond a doubt the earliest of all turnip-shaped beets and the greatest money-maker in the list. Try it. 228 Sugar Beet Klein Wanzleben

Genuine Sugar Beet for Making Sugar

This Beet is the result of years of methodical and persevering selection. It is extremely rich in sugar, thousands of analyses showing that the average percentage of sugar obtained from this variety is about eighteen and its average yield may be stated as from 15 to 16 tons an acre, but crops of 25 to 40 tons per acre have been obtained off it. Flesh finely grained and very sweet. Excellent for milch cows and stock feeders. Oz. 15c; $\frac{1}{4}$ lb. 40c; $\frac{1}{2}$ lb. 70c; lb. \$1.35; 5 lbs. \$6.25, postpaid.

227 Giant Feeding Sugar Beet, or Half Sugar Mangel

This magnificent Sugar Beet, while giving nearly as large a yield of easily grown and harvested roots as a crop of Mangels, supplies a food of very much higher nutritive value, the roots for feeding purposes being really more valuable, pound for pound, than those of the very best strains of Sugar Beet, and the yield under equally favorable conditions being more than double. The roots grow partly out of the ground, and because of this and their shape, the crop can be harvested and stored at less expense than any other root crop. We are certain that every one who plants this variety and grows it with care will be much pleased with the crop. Every farmer should try it. Tall Select Strain for Critical Planters

Without doubt the very finest celery in cultivation and the Biggest Money Maker. Stalks Thick, Crisp and Brittle. No Hollow Centers. Blanches itself to a Beautiful Golden Yellow. We supply it annually to the largest and most critical planters in America. The plants are of medium size, compact and stocky, with yellowish green foliage. As they mature the inner stems and leaves turn beautiful golden yellow so that blanching is effected at a minimum expenditure of time and labor. Its handsome color, crispness, tenderness, freedom from stringiness, and fine nutty flavor have established it as a superior first early sort. Equally desirable for muck or upland farms. Pkt. 15c; ½ oz. 35c; oz. 60c; ¼ lb. \$1.75; ½ lb. \$3.25; lb. \$6.25, postpaid.

315 GIANT PASCAL Considered by many the standard winter Celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. Condon's Cannon Ball Cabbage—Earliest of All

1 oz. of seed will produce 3,000 plants. 1 lb. for 7 acres.

Condon's Cannon Ball represents the highest achievement in Cabbage breeding, and is the best extra early round headed Cabbage we have ever grown or seen. In uniformity to type and evenness in early maturing it is a marvel. Every row and every head in a row looks as nearly alike as if all had been turned out of a mold. Its evenness in maturing has proved it a great favorite with all Cabbage growers as they appreciate the great importance of being able to clear off the ground at one cutting, especially where room is required for a second crop. The plants are of compact, stocky growth, producing large, solid, ball-shaped heads which average about five pounds in weight, and are of the very finest quality, smooth with fine veins and small core. Will yield a greater crop per acre than other Cabbage of which we know. For both private gardens and marketing this is the **One Best Early Cabbage** and the **Greatest Money Maker** of all. Its remarkably fine quality and tenderness, whether cooked or sliced for slaw or salad wins friends wherever tried, while for marketing its handsome saleable appearance and uniformity in maturing the crop has caused it to be in great demand. Last year we sold out our entire supply and received hundreds of unsolicited testimonials from customers from all over the country, from Maine to California and from Canada to the Gulf of Mexico. Send your orders early for some of this grand Cabbage. Pkt. 15c; ½ oz. 35c; oz. 60c; ¼ lb. \$1.40; ½ lb. \$2.50; 1b. \$4.75, postpaid.

Ball Head

This celebrated Cabbage is now recognized the world over as the Hardest Headed, Longest Keeper, Best Shipping and Biggest Money Maker of all winter varieties. It is now grown almost exclusively in the large Cabbage growing sections north of the Ohio River. It is not especially suited to the south, but for northern states and in cold climates it beats all other varieties a mile. It is a strong, vigorous grower, producing large, round, compact heads, almost as hard as lead, weighing when trimmed, one-third more than any other sort of equal size (excepting Cannon Ball). Flesh is pure white, sweet, crisp and tender. Our strain of this excellent variety is highly bred and from our repeated trials as well as from the experience of our many customers purchasing this seed annually we are convinced **Our Strain Surpasses** in even growth and heading, as well as in uniform-size and solidity of heads, any other strain we have ever seen of the so-called "Hollander Cabbage." Danvers carrots have been the standard for over fifty years and we need not try to offer any proofs as to their popularity. Carrot-breeding is in about the same class as stock-breeding, and if same is not kept true, will deteriorate very quickly. We have endeavored to do more than keep the old parent sort true, and have actually bred up the quality of Danvers Carrot to such perfection that the old parent sort would be ashamed of itself. To distinguish our sort from others, we have termed our strain Condon's Select Danvers. Same has been bred for quality and for yield and on a given acreage it has produced a larger crop of marketable roots than any other garden or table variety. The roots are of a rich orange color, crisp and sweet. Pkt. 15c; oz. 30c; ¼ lb., 90c; ½ lb. \$1.60; 1b. \$3.00, postpaid.

723 Condon's Silver Queen or White Bantam

The Best, Largest and Sweetest Extra Early White Sweet Corn is What our Customers Say. Ready for Market in This Locality in Early July. Since the Pilgrims settled in Massachusetts, Sweet Corn has been one of the most relished vegetables. Ever since, man has striven to produce a better quality. By crossing various types, improvements have been made, until one would think we had reached our zenith; especially after tasting delicious Golden Rod and Golden Bantam. These were far superior to any previously introduced, "but the color was against them." Once again Nature proved a wonder, for we found in our field of Golden Bantam several ears containing a few white grains. They were selected, planted by themselves, and today we have a distinct type of **White Bantam**, known as our **Silver Queen**. Think of it, a **White Bantam Corn**, which contains all of the sweet lusciousness of the yellow sorts. In habit of growth it excels all other early varieties, being stocky and vigorous. Ears 6 to 7 inches long, frequently bearing four and five good ears on a single stalk. 2 oz. pkt. 10c; ½ lb. 25c; 1 lb. 40c; 2 lbs. 70c, postpaid.

731 Golden Early Market (70 days)

One of the Earliest Yellow Sweet Corns

In our trials Golden Market produced large marketable ears 8 days earlier than Golden Bantam and 3 days earlier than Golden Sunshine, maturing marketable crop in 70 days from time of planting. Ears 8 inches long, 10 to 12 rowed, fine grained, delicious flavor, stalks 4½ feet high. A sure money maker for market gardeners where a matter of 5 to 10 days in marketing a crop makes a tremendous difference in the value per dozen or 100 ears. 2 oz. pkt. 10c; ½ lb. 22c; 1 lb. 38c; 2 lbs. 65c, postpaid.

Hybrid Varieties of Sweet Corn

Hybrid Sweet Corn, the same as Hybrid Field Corn, is more resistant to disease, produces heavier root growth, stands up better, is more prolific and will outyield open-pollinated 50%. If you have had trouble in the growing of Sweet Corn on account of Stewart's disease, then grow these Hybrid varieties and be assured of a big profitable crop.

736 Spancross 13 x 4 (Yellow Hybrid) (65 days)

Carmelcross is 4 days later than Marcross and is ready to pick after you have finished with Marcross. The ears will average 7 to 7½ inches in length, are borne well up on the stalk, are 12 rowed with broad, deep kernels of the highest quality.

723 Condon's Silver Queen or White Bantam

732 Golden Cross Bantam (79 days)

It retains its whiteness when put up in cans as distinct from the yellowish tinge of the still popular original Stowell's Evergreen. 2 oz. pkt. 10c; ½ lb. 22c; 1 lb. 38c; 2 lbs. 65c, postpaid.

Cushing, Okla., Aug. 28, 1944.
Condon Bros. Seedsmen.
Gentlemen:— Last year I ordered some of your Condon's Perfection Muskmelon Seed at Springdale, Arkansas. I had some of the Seed left over and planted 70 hills here at Cushing. I don't believe that I had a melon that weighed less than 7 lbs., and many weighed 15 lbs. and over. It was as sweet as sugar, and thin rinded. I have raised lots of Muskmelon in the past, but this melon takes the head of the class.
Yours very truly, C. G. BATHE.

Suitable for Shipping One to Three Hundred Miles

There is no melon superior in quality to a good strain of Kleckley Sweets. The bright scarlet flesh is the ideal of water melon quality—firm, crisp, entirely free from stringiness or cotton, and "sweet as sugar."

The melon is oblong in shape, about 20 inches in length by 10 to 12 inches in diameter. The skin is a rich dark green; the rind is thin and brittle, and for this reason the melon is not a good shipper to a distance beyond two or three hundred miles, but for home use and nearby market consumption it's got 'em all backed off the list. Our seed is all saved from hand selected, uniform, well shaped, fully matured, ripe melons. This extra care in selecting the melons from which the seed is saved costs a little more than the method generally used but it insures you seed of the highest quality with strong, vigorous germination. Pkt. 10c; oz. 25c; ¼ lb. 55c; ½ lb. 85c; lb. \$1.50, postpaid.

The flesh is white, of fine texture, free from core and stringiness, and especially fine flavored, cooking tender, sweet and rich rendering it one of the finest of table vegetables for winter use. The roots being hardy may remain in the ground all winter or some may be dug late in the fall and stored in sand or soil, so that they can be easily procured when the ground is frozen. Frost improves their quality. This parsnip is the heaviest cropper of all, and we recommend it for both garden and field culture. Pkt. 12c; oz. 25c; ¼ lb. 60c; ½ lb. 95c; lb. \$1.75, postpaid.

About Condon's First of All Tomato

"Your First of All Tomatoes are wonderful. I made big money on my crop this year."—Fred G. Deishlie.

Gentlemen:

Dec. 25, Sioux Center, Iowa.

As we had a fine crop of your First of All Tomatoes we had about 2000 plants this year and harvested 500 Bushel of them. We want to praise them very highly, and besides that we enclose a photo of my husband holding a cluster in his hand with 42 well developed Tomatoes on it, and the same vine produced 84 more well grown Tomatoes, and the vine was full of blossoms. We were indeed very well pleased with them. Yours truly, Mr. & Mrs. Ed. Poel.

Gentlemen: I am sending you a cluster of your First of All Tomatoes, that I grew this year. This cluster contains ten large luscious tomatoes. Many clusters contained twelve to fifteen tomatoes. I don't see how the vine holds them up. They are the best I ever saw. I make big money on them.—Earl Mouck.

In shape, CONDON'S PEERLESS is smooth, well formed and extremely deep from stem to blossom, making it unusually heavy. It ripens evenly to the stem and is without ridges or cracks; it has great meatiness and few seeds. It is firm without being hard, unrivalled home and market tomato. The vines are vigorous but compact. The joints are short and it always fruits in large clusters at every second joint, which accounts for its wonderful productiveness. Condon's Peerless is the heaviest for its size of any variety and, on account of its brilliant red color, depth and solidity, is one of the handsomest tomatoes. Its beautiful appearance and color make it sell ahead of all sorts, and its unusual solidity, few seeds and desirable form for rapid peeling without waste, make it a most desirable canning and slicing variety. It costs you no more; takes no more time to grow the best than it does to grow the more common sorts and we think you will find Condon's Peerless one of the Grandest Tomatoes you have ever grown. 1404 New Mukden

Late introduction by the University of Iowa. Here is a new variety of Soy Beans that has produced unusually large yields in Northern Indiana, Illinois and Iowa, many fields averaging as much as 40 bushels per acre. The Mukden usually has three beans in a pod. The pod starts six inches from the ground. The plant grows about six inches taller than Illini or Manchu and matures about 10 days earlier. This is a yellow-seeded variety which is the universal favorite as a market sort. Supply of seed is limited so order early please. Postpaid, 1 lb. 25c; 2 1/2 lbs. 50c; 5 lbs. 85c.

Dependable Crop For Hay Even Under Most Extreme Weather Conditions. Big Money In Them For Commercial Markets—Plant a Big Acreage This Year.

1402 Illini Soy Beans (105 Day Bean)

Illini was developed at the Illinois Experiment Station. It has been constantly increasing in popularity. It seems to grow a little taller than Manchu, giving a heavier yield while, in season, it is a few days earlier. Just as desirable in every other way and we would say better for hay in Northern Illinois, Michigan or Wisconsin. Postpaid, 1 lb. 25c; 2 1/2 lbs. 50c; 5 lbs. 85c.

1403 New Richland Soy Beans Profitable Early Variety (100 Days)

A new strain from the Purdue Experiment Station. Matures from 10 days to two weeks earlier than Illini. This makes it especially suited to Central Corn Belts where large Soy Bean acreages are raised annually, as it permits the harvesting of this variety before Illini comes into maturity. For Northern Illinois, Southern Wisconsin, Minnesota and similar localities it is highly recommended on account of its early maturity. Its outstanding features are early maturity, high yield, excellent lodging resistance, and high oil content. Postpaid, 1 lb., 25c; 2 1/2 lbs., 50c; 5 lbs., 85c.

Naturally suited to cool, moist regions, it is also rather tolerant of shade. **Postpaid, ¼ lb., 35c; ½ lb., 65c; lb., \$1.25; 2½ lbs., \$3.00; 5 lbs., \$5.75.**

1224 Blue Grass
Fancy Kentucky

1224 BLUE GRASS—FANCY KENTUCKY

Good pastures are profitable; poor ones are money losers. The government recognizes this in AAA by paying up to \$1.50 per acre for reseeding old pastures with adapted grasses. Kentucky Blue Grass is an adapted grass to a wide area. It will pay handsome dividends to reseed old pastures or start new ones with this high quality seed. Our Kentucky Blue Grass Seed is all new crop, double remilled, extra heavy, fine, bright seed of high purity and strong germination. We recommend sowing 25 to 35 lbs. per acre alone or in combination with Red Top and Orchard Grass. For making a beautiful permanent lawn, sow at the rate of 1 lb. to 200 square feet. **Postpaid, ½ lb., 28c; lb., 50c; 2½ lbs., \$1.20; 5 lbs., \$2.25. Two weeks earlier than the Common Tall Sweet Clover. It is a biennial, just like the Tall Sweet, but it does not grow quite as tall. However, it produces a high quality hay and lots of it. It is a wonderful soil builder, and in addition it is better for pasture than the Common as it stays green longer. Postpaid, $\frac{1}{2}$ lb., 30c; lb., 50c; $2\frac{1}{2}$ lbs., \$1.15; 5 lbs., \$2.15. 1231 Bromus Inermis "Purity Brand" Hardy Perennial

Marvelous drought defying hardy grass that makes excellent combination hay, seeded alone or with Alfalfa. Recommended by the Michigan Experiment Station. Sow in spring or in early August 5 lbs. of Bromus with 10 lbs. of Alfalfa. Don't pasture until fairly good top growth develops. Cattle will actually eat the Bromus Grass first, allowing the Alfalfa better chance to get established. If seeded alone sow 20 lbs. per acre. Has given excellent satisfaction even on light sandy soils in northern Michigan. An extremely hardy perennial grass we highly recommend either for hay or pasture. Postpaid, $\frac{1}{2}$ lb., 30c; lb., 55c; $2\frac{1}{2}$ lbs., \$1.25; 5 lbs., \$2.25. AN EARLY DROUGHT-RESISTANT SOIL-BUILDER Does Especially Well in High Altitudes. Greatest Annual Pasture or Hay Crop Ever Introduced

The abundant growth and deep penetrating roots covered with nodules make it an outstanding grazing and soil-building legume. The strong root growth penetrates about 8 inches deep, making it highly drought-resistant, and thriving on poor, wornout soils where alfalfa and clovers would fail. In feeding value it is about equal to alfalfa; has no woody stem; holds its leaves well and produces a full crop the first season. A harrowing before sowing is the only preparation necessary. Postpaid, ½ lb., 30c; lb., 50c; 2½ lbs., \$1.15; 5 lbs., \$2.00. Not Prepaid, ¼ bu., \$2.75; ½ bu., \$5.25; bu., \$10.25; 2 bu. and over, @ \$10.15 per bu.

The new permanent Clover introduced by the U. S. Dept. of Agriculture. Perennial legume which grows on poor land and acid or sour land as well as rich land. After established, it is a great drought-resister with an enormous root system. It enriches the soil, lives through the winter, starts growth early in spring and gives at least 3 cuttings a season with as high as 3 tons per acre at one cutting of hay. All kinds of stock relish the hay, and it may be closely grazed.

Sow rather shallow in the spring or fall in well prepared, warm soil 4 lbs. per acre in drills or 12 lbs. per acre broadcast. Postpaid, ½ lb., 35c; lb., 60c; 2½ lbs., \$1.40; 5 lbs., \$2.75. Not Prepaid, ¼ bu., \$4.95; ½ bu., \$9.60; bu., \$18.85; 2 bu. and over @ \$18.75 per bu.

Combined with soy beans, as ensilage, it makes an ideal balanced ration (two parts of millet to one of soy beans). Adapted to all sections of the country; it makes more hay than any other millet, and requires less seed. It is the ideal catch crop, and may be sown from May to July. For hay, cut it just before it blossoms, and cure the same as clover. It also makes good pasture, but the cattle must be accustomed to it gradually. Postpaid, lb. 35 cts.; 2½ lbs. 85 cts.; 5 lbs., \$1.60. Not Prepaid—½ bu. \$1.60; bu. \$3.00; 2 bu. and over @ \$2.95 per bu.

1413 Sudan Grass

Wonderful Quick Hay Crop

One of the best annual forage plants ever introduced, suitable for almost any locality. Sudan Grass thrives best on rich loam, but has been successfully grown on almost every kind of soil, from heavy clay to light sand. Cold, wet, boggy soils are not suited to Sudan Grass.

Sudan Grass is a sorghum, and an annual, without underground root sprouts. It grows 4 to 5 feet high in drilled seedings, and 5 to 8 feet in cultivated rows. Do not sow Sudan Grass before corn planting time. Like corn, it is a warm weather crop. In favorable seasons, the growing period is long, and several cuttings can be obtained in one season. For hay it is ready to cut in 60 to 75 days, when it is in full head. It continues its growth, and in 40 to 45 days it is ready for another cutting.

Sudan Grass is an enormous yielder, producing 3 or 4 tons of hay at the first cutting. The second cutting is lighter, and the hay is much finer. Live stock of all kinds will eat the hay readily.

For hay, sow at the rate of 20 to 30 lbs. per acre, using a grain drill, and cover from one to one and one-half inches deep. Heavy seeding makes finer quality hay. Postpaid, lb., 35c; 2½ lbs., 60c; 5 lbs., \$1.00. Not Prepaid, 10 lbs., \$1.25; 25 lbs., \$2.75; 50 lbs., \$5.00; 100 lbs., \$9.75; 200 lbs. and over @ \$9.50 per 100 lbs.

1343 Canadian Field Peas

Illustration to left shows field of Canadian Peas and Oats yielding 5 tons per acre 60 days from planting.

Canadian Field Peas and Oats seeded in the early spring at the rate of 1 bushel of each per acre, makes the best extra early annual hay crop. This combination makes an average yield of 2 18/100 tons of excellent feed per acre. Feed is almost equal lb. for lb. with Clover Hay. It is relished by all live stock. Canadian Field Peas are extremely hardy; therefore, may be seeded very early along with your Oats. They may be broadcast or sown with a grain drill, but be sure to cover the seed about ½ inch deep in either case. If you want this for a hog pasture suggest you add 5 lbs. of Essex Dwarf Rape per acre. Postpaid, lb., 35 cts.; 2½ lbs., 85 cts.; 5 lbs., \$1.50. Wisconsin's Newest and Heaviest Yielding Variety

Many customers report average yield better than 85 bushels per acre. Measured weight, 36 to 38 lbs. per bushel. Generally considered the most outstanding introduction in Seed Oats up to the present time. Our sales last year were better than 6000 bushels. Our advance bookings for this spring are very heavy, so advise you to order early.

Wisconsin's Newest and Heaviest Yielding Oat—Rust and Smut Resistant—Grown From Wisconsin Certified Seed. Vicland was developed by the Wisconsin Agricultural Experiment Station from a cross between Victoria, a South American Oat, and Richland, a variety that originated in Russia. This will be the third year that the seed is offered commercially. Vicland is a very heavy Oat and a very heavy yielder; many report over 85 bushels per acre. It's an early yellow short straw, but on fertile soil the straw grows to a good height. Not recommended for soil low in fertility as the straw is apt to be too short to cut with a binder. When shocked it will stand for a long period without germinating. A distinct advantage in rainy weather. **Our Supply Limited, so Order Early. Postpaid, lb. 30 cts.; 2½ lbs., 60 cts.; 5 lbs., \$1.25. Not Prepaid, ½ bu., 95 cts.; bu., \$1.75; 2 to 5 bu. @ \$1.73 per bu.; 5 to 10 bu. @ \$1.70 per bu.; 10 bu. and over @ \$1.65 per bu.**

NOTICE

In view of the universal demand for New Vicland Oats as described above, we are discontinuing offering other varieties until something better in our judgment is introduced.

Corn Ever Grown

40 Tons Per Acre Common Yield—
70 Tons Have Actually Been
Produced

A fine strain of ensilage corn, selected by ourselves, which has proved to be one of the most valuable and largest yielding ensilage corns in cultivation. It grows very tall, attaining a height of 16 to 20 feet; is prolific in its nature, having from two to six ears to the stalk, makes a heavy thick growth of fodder, and is altogether, in our opinion and in the opinion of those who have tested it, the best and most productive of ensilage corns. Hundreds of Farmers Write Like These Two

Gentlemen: Please send one and one-half bushels Condon's "Silo King" Seed Corn. We have used this corn the past two years with very good results. We find it an exceptionally good ensilage crop as it grows tall and large and produces large ears. Last year we put up 165 tons silage from seven acres, while before this we always used 15 to 20 acres and even then we have failed to fill the silos.

CRYSTAL SPRINGS DAIRY, C. L. Burch, Neosho, Missouri.

I cannot help but write you regarding my silage which was produced from your Silo King Corn. It is simply marvelous. The extra large ears and leafy stalks made the most wonderful silage I have ever grown. I will buy your Silo King Corn every year. Stalks grew very tall producing better than 40 tons per acre and the most wonderful silage one could wish for. This certainly is a big profitable cropper and I will recommend it to my neighbors.

Few Hybrids have jumped into wide popularity so quickly as G-114. It was grown commercially for the first time in 1938 and proved so outstanding that the demand far exceeded the supply for 1944 planting. With stalk quality second to none, large ears which do not drop and ability to stand adversity this Hybrid has few, if any equals for territory North of Joliet, Illinois, to the Wisconsin line and East and West through Illinois, Indiana, Iowa and Ohio. Not recommended for other localities.

CONDON'S HIGH-YIELDING—OPEN-POLLINATED SEED CORN ⁷⁷

Well Graded—High Germination—Sold on Your Approval

Condon's Golden Harvest

An Ideal Variety for Northern Illinois, Indiana, Ohio, Iowa

A splendid corn to sell in market on the ear. Will produce a satisfactory crop with less favorable conditions than those required by Reid's Dent. In numerous tests on both good and poor soil we have found that it responds to good soil and cultivation with an immense yield; it will also produce more corn with ordinary treatment than any other large-eared variety. The plant is ideal, the stalk being about eight feet high with abundant broad leaves and so well rooted that it withstands wind storms extra well. Ears are borne uniformly at about four feet from the ground, high enough to get at the sun and air, low enough to be protected from wind storms and just right for husking. The shank is long, allowing the ear to droop when maturing, thus shedding the rain instead of holding it in the husk. The ears are large, 10 to 12 inches long, nearly cylindrical, holding their size well to the end and well rounded or capped over at both ends.

Condon's Golden Harvest

Condon's Golden Glow

The Best Yellow Corn for Wisconsin and all localities north of Rockford, Ill.

Golden Glow is the most popular variety in Wisconsin corn. It is grown more largely than any other variety. It certainly is well adapted to all sections of the state as far north as north-central Wisconsin. It is a little earlier than either Murdock or Silver King, hence safer in an unfavorable season.

Description. Golden Glow is a pure golden yellow corn, ears fairly large, the standard official length being 8 1/4 to 9 1/4 inches.

Improved Leaming

The Leaming is the oldest distinct variety of corn, having been originated in 1826. It is a standard yellow corn, well adapted to northern and central Illinois and the most of Iowa, and similar latitudes. In fact, it is grown with success in southern Wisconsin and is in great demand in the north for silage. Not quite as large and not quite as late as Reid's Yellow Dent.

Iowa Gold Mine

One of the old standard favorites producing an abundant crop of excellent quality. 115 to 120 day variety. Not suited for Northern latitude. Our seed is grown in central Illinois, and especially suited for planting in the Central or Southern district of the Corn Belt. Ears are good size, very symmetrical. The kernel is deep yellow with a small red cob. Stalks are stiff, heavily leaved, making an excellent silage or fodder variety.

Silver King (Wisconsin No. 7)

By Far the Best White Dent for Wisconsin, Northern Illinois and Iowa Silver King is not only the best white variety but one of the best and heaviest yielders of all varieties of corn for the Northern states. It is a big yielder. The Official Description from Wisconsin College of Agriculture Corn Bulletin No. 170, is as follows:

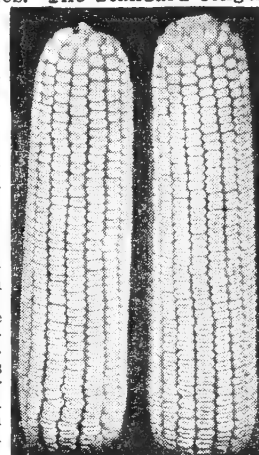

"This variety is a uniform creamy white in color and has a slight roughness of kernel. The cob is glistening white. The length of ears varies from 7 to 10 inches. The standard length is from 8 1/2 to 9 1/2 inches.

Boone County White

Grain very deep, little rough. Extremely attractive Corn both on the ear and shelled. Prize winner in many markets. 120 day corn.

Silver King (Wisc. No. 7)

Reid's Yellow Dent

Reid's Yellow Dent

Leading standard yellow variety originated many years ago by Mr. James L. Reid of Illinois, who fixed a type that experts have failed to change for the better. **Description**—Color deep yellow, with lighter cap. Grain very deep, closely packed; butt and tips almost entirely covered. Slightly rough, with grains dented on top. Leaves and stalks of Reid's Yellow Dent make the finest ensilage and fodder. Matures in about 120 days. **Adapted**—Reid's Yellow Dent is adapted to central and southern portions of Iowa, Ind. and Ill., Eastern Kans. and Okla., Southeastern Nebr., Mo., Texas, Arki., La., Miss., Ga., Ala., Tenn., Ky. and Va.

Murdock Yellow Dent

Wisc. No. 13

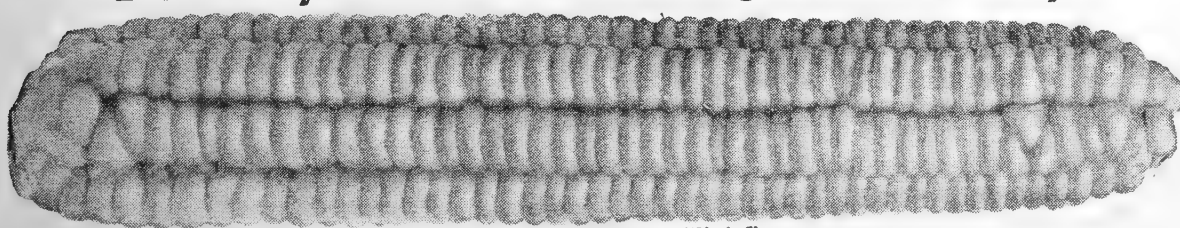

Murdock Yellow Dent is of a deep yellow color, ears 8 1/2 to 9 1/2 inches in length, hard and solid, just slightly rough and very uniform in type. It makes a large heavy growth of stalk and leaf and so it is a good silage variety. Murdock is not a whole lot different from Golden Glow but it grows a trifle larger both in stalk and ear and yields a trifle more.

KING PHILIP RED FLINT. This extra early corn is eight-rowed and one of the most reliable and productive varieties for the Northwest. The ears grow 12 inches long. IMPROVED YELLOW YANKEE. Particularly adapted to the Northern Middle States. One of the earliest and best known yellow flint varieties. The ears are well filled to the tips with good, rich, golden-yellow kernels. The stalks grow five feet high and often produce two and three ears each.
